Bracket, Security Camera, Screw-in,
Free Standing & Post Mounts

Instructions

Pick your spot or location for your Camera. Then place the style of Trail Camera Mount that you chose. (These can also be used on the Camera steel Security Enclosures.)

Bracket Mount Instructions

Fasten the bracket to the tree or post with either the Phillips head screw or strap and buckle (both enclosed). The bracket has 2 holes down the center beneath the 1/4-20 stud and 2 slots on each side of the bracket. When attaching with the strap, hold the bolt side of the bracket facing outwards and the bolt position at the top. Placing the strap over the bracket, feed the strap down thru the 2 inner slots, roughly finding the center of the strap, then feed the 2 ends back up thru the outer slots.

Attach the buckle by looping the tails of the strap on both ends of the buckle and pull the straps tight.

When attaching with the supplied screw, use the hole just below the stud. Once you secure the bracket, screw your Camera onto the 1/4-20 stud and tighten the thumb nut to secure it. Loosen the plastic T-handle slightly to position your Camera in the direction you want it aimed. (Be sure to hold on to your Camera while T-handle is loosened.)

Security Camera Mount

Heavy duty Mount for Security Camera Enclosures that use ratchet straps to secure. (Straps NOT included with this mount.)

Screw-in Mount Instructions

This bracket has a screw spike inserted in one of the polypropylene balls. Just screw the bracket into a tree or post. Once you secure the bracket, screw your Camera onto the 1/4-20 stud and tighten the thumb nut to secure it. Then loosen the plastic T-handle slightly to position your Camera in the direction you want it aimed. (Be sure to hold on to your Camera while T-handle is loosened.)

Free Standing Mount Instructions

To assemble the Free Standing Mount, place the rod that has the shaft collar down over the ground support spike and tighten knob, tramp the spike in the ground, place the rod (w/ball on top) over the spring pin on the first rod. Assemble connecting links over the 2 balls and tighten the T-handle. Once you secure the mount, screw your Camera onto the 1/4-20 stud and tighten the thumb nut to secure it. Then loosen the plastic T-handle slightly to position your Camera in the direction you want it aimed. (Be sure to hold on to your Camera while T-handle is loosened.)

Suggestion: Assemble the Free Standing Mount before taking it to the woods. Leaving the balls attached, take the top rod apart by pressing the spring pin, loosen knob on shaft collar. All 3 pieces will then fit into a bag or backpack to carry to the woods.

Need your camera lower; you can use the shaft collar and just the top rod. Or need it taller you can buy extension rods from our Accessories.

If you have 2 Cameras you can watch 2 trails at the same time.

Post Mount Instructions

The Post Mount comes with our Bracket Mount (minus the strap and screw) to make it possible for clamping onto a 1" fence post, rod or small tree branch. Hook the one side of Post Mount thru one of the outer slots on the Bracket mount, push thru far enough to be able to latch the second side in the other outer slot and tighten the T-handle.
